## **Why Choose Us?**

- **Locally Owned and Operated since 2000**
- **Trained and State Certified Applicators**
  - **Horticulturist on Staff**
- **Our skilled technicians evaluate your lawn at each visit to spot potential insect and disease issues in your turf**
- **Golf course quality products for optimum results**

### **Our 5 Application Program break down and why it's necessary**

#### **1st Application March- May**

##### **Pre-emergent crab grass preventer with balanced fertilizer**

This treatment is to stimulate the roots for quick spring green up. The crabgrass control applied to prevent crabgrass seed germination. This application is a dry granular product.

**What is crabgrass?** It's an annual grassy weed that spreads thousands of seeds during its lifespan. Annual grassy weeds are tough, aggressive plants that thrive on stressed areas of your yard. Dried out lawns, thin patches, and areas along the driveway and sidewalks are inviting spots for crabgrass. It only lives for one growing season, so it spreads fast. Over time, crabgrass can overrun your yard if you don't treat it.

#### **2<sup>nd</sup> Application May-June**

##### **Premium broadleaf Herbicide Weed Control**

This treatment is to control a wide spectrum of existing broadleaf weeds in the lawns. We generally will do a treatment after the spring Dandelions bloom. This a liquid blanket application sprayed on the entire lawn.

**What is a broadleaf weed?** The term broadleaf weed means weeds with broad or wide leaves and a pair of cotyledons, or seed leaves. An example of a broadleaf weed include Dandelions, clover, Thistle, ground ivy (creeping Charlie).

#### **3<sup>rd</sup> Application June-July**

##### **Balanced Premium Fertilizer**

This treatment is a slow released balanced nitrogen based fertilizer to help improve color and heat resistance for your lawn. This application is a dry granular product.

**Why Slow Release?** Slow release fertilizer is a coated granule that is activated as it come into contact with water and slowly released over time. The advantage is you get a steady green lawn all season long.

#### **4th Application July-September**

##### **Premium broadleaf Herbicide Weed Control**

This treatment is to control a wide spectrum of existing broadleaf weeds in the lawns; the late season application takes care of the late blooming weeds and cleans the lawn the remainder of the season. This a liquid blanket application sprayed on the entire lawn.

**Why two broadleaf weed treatments?** The late season application helps knock out the hard to get weeds like ground ivy (creeping Charlie) and thistle. It also the best time to treat dandelions for the following spring this is because the plants are transferring energy into to the roots to over winter, there for herbicide is extremely effective.

#### **5<sup>th</sup> Application Late October-November**

##### **Late Fall Fertilizer**

This treatment is the most important fertilizer application you will receive. It is a slow release balanced nitrogen based fertilizer that will stimulate root development for winter and provide you with an early quick green up in the spring.

**What else can be done going into winter?** Leave your lawn longer 3-4" in cut height to promote foliage more surface area to store nutrients.
